CC Important in physiological phenomena such as cell rolling, metastasis and confinammation, where the epitope is capable of being bound by an antibody, its antigen-binding fragment or its complex comprising at least one continuous or its binding fragment having a first hypervariable region. The epitopes are useful for inhibiting cell rolling, inflammation, autoimmune consists, thrombosis, restenosis, metastasis, growth and/or replication of tumour or leukaemia cells, increase in number of tumour or leukaemia cells, increase in number of tumour or leukaemia cells in a patient, cell-cell, cell-matrix, platelet-matrix, for increasing mortality of tumour or leukaemia cells, for increasing mortality of diseased cells to damage by anti-disease, anti-cancer or anti-leukaemia agents, or for decreasing the number of tumour or leukaemia cells in a patient, or in the manufacture of a medicament for the above mentioned purposes. The epitopes are useful for diseasent for the above mentioned purposes. The epitopes are useful for diseased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; antibody; epitope; cancer; tumour; cell rolling; inflammation; metastasis; hypervariable region; autoimmune disease; thrombosis; restenosis; leukaemia; inflammatory disease; cardiovascular disease; myocardial infarction; retinopathic disease; abnormal platelet functisulphated tyrosine-dependent protein-protein interaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated epitope present on cancer cells and important in physiological phenomena such as cell rolling, metastasis and inflammation, for treating autoimmune, inflammatory or cardiovascular inflammatory or cardiovascular inflammatory.

                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC molecule, a construct or fragments or a construct of a fragment with Cc enhanced binding characteristics which selectively and/or specifically CC binds to a target cell in favour of other cells, where binding is comparable region and Fv is a single CC primarily determined by a first hypervariable region and Fv is a single CC chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in CC association with or attached, coupled, combined, linked or fused to a cC pharmaceutical agent, is useful in the manufacture of a medicament, where CC the medicament has activity against a diseased cell, preferably a cancer CC cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, CC myeloma, blastoma, seninoma, and melanoma, where the leukaemia cell is an CC acute myeloid leukaemia cell). The peptide is also useful for preparing a CC composition for use in inhibiting the growth of a diseased or cancer Ccell. This sequence represents a human Fv molecule hypervariable region CC related peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The peptide, optionally in association with or attached, coupled, combined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an acute myeloid leukaemia cell; The peptide is also useful for preparing a composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human Fv molecule hypervariable region

The invention relates to an isolated epitope present on cancer cells and CC important in physiological phenomena such as cell rolling, metastasis and CC inflammation, where the epitope is capable of being bound by an antibody, CC its antigen-binding fragment or its complex comprising at least one CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC epitopes are useful for inhibiting cell rolling, inflammation, autoimmune CC disease, thrombosis, restenosis, metastasis, growth and/or replication of CC tumour or leukaemia cells, increase in number of tumour or leukaemia CC cells in a patient, cell-cell, cell-matrix, platelet-matrix, cell-epitopes are useful for increasing the CC gratelet-platelet and/or cell-platelet adhesion or aggregation, for CC increasing mortality of tumour or leukaemia cells, for increasing the CC susceptibility of diseased cells to damage by anti-disease, anti-cancer CC crateling agents, or for decreasing the number of tumour or leukaemia cells in a patient, or in the manufacture of a medicament for CC the above mentioned purposes. The epitopes are useful for diagnosing and CC inflammatory diseases such as cancer, leukaemia, autoimmune diseases, CC inflammatory diseases, cardiovascular diseases such as myocardial CC infarction, retinopathic diseases and other diseases mediated by abnormal CC platelet function and diseases caused by sulphated tyrosine-dependent correction interactions. This course care as a striked.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of hits satisfying chosen parameters:
